

## **ABSTRACT OF THE DISCLOSURE**

The invention relates to a holder (1) for plant cuttings (12), comprising at least one carrier (2, 3) and a series of clamping elements (13) which are fixed to the carrier (2, 3) and which are each adapted to clamp a plant cutting (12), wherein the clamping elements (13) are fixed to the carrier (2, 3) such that plant cuttings (12) clamped in the clamping elements (13) extend substantially parallel to each other, and the center of each of the clamping elements (13) is situated substantially in the same central plane. As a consequence of these measures it is possible to transport plant cuttings on a relatively small surface area and to subject them to an initial treatment, for instance in a climate chamber. A final advantage is that the holder enables mechanical processing, for instance striking, of the plant cuttings.

**(54) Title:** HOLDER FOR PLANT CUTTINGS

**(57) Abstract**

The invention relates to a holder (1) for plant cuttings (12), comprising at least one carrier (2, 3) and a series of clamping elements (13) which are fixed to the carrier (2, 3) and which are each adapted to clamp a plant cutting (12), wherein the clamping elements (13) are fixed to the carrier (2, 3) such that plant cuttings (12) clamped in the clamping elements (13) extend substantially parallel to each other, and the centre of each of the clamping elements (13) is situated substantially in the same central plane. As a consequence of these measures it is possible to transport plant cuttings on a relatively small surface area and to subject them to an initial treatment, for instance in a climate chamber. A final advantage is that the holder enables mechanical processing, for instance striking, of the plant cuttings.
